

Explanatory Memorandum to:

The National Health Service (Ophthalmic Services) (Wales) Regulations 2023 (“the Ophthalmic Services Regulations”).

The National Health Service (Optical Charges and Payments) (Amendment) (Wales) Regulations 2023 (“the Optical Charges Regulations”).

This Explanatory Memorandum has been prepared by the Primary Care & Mental Health Division, Health and Social Service Group and is laid before Senedd Cymru in conjunction with the above subordinate legislation and in accordance with Standing Order 27.1.

Minister’s Declaration

In my view, this Explanatory Memorandum gives a fair and reasonable view of the expected impact of the National Health Service (Ophthalmic Services) (Wales) Regulations 2023; and the National Health Service (Optical Charges and Payments) (Amendment) (Wales) Regulations 2023. I am satisfied that the benefits justify the likely costs.

Eluned Morgan MS
Minister for Health and Social Services

29 September 2023

PART 1

1. Description

The National Health Service (Ophthalmic Services) (Wales) Regulations 2023

1.1 The National Health Service (Ophthalmic Services) (Wales) Regulations 2023 (“the Ophthalmic Services Regulations”) consolidate, revoke and replace with amendment the following regulations in relation to Wales:

- a. the National Health Service (General Ophthalmic Services) Regulations 1986 (“the 1986 Regulations”);
- b. the National Health Service (General Ophthalmic Services Supplementary List) and (General Ophthalmic Services) (Amendment and Consequential Amendment) (Wales) Regulations 2006 (“the 2006 Regulations”).

2.1 The Ophthalmic Services Regulations expand the core eye care services provided in primary care in Wales to include eye examinations in addition to sight tests. The regulations direct Local Health Boards (LHBs) to make arrangements for the provision of eye examinations in their area and they make provision as to the arrangements between LHBs and those who undertake to provide these core services on their behalf. The regulations also require each LHB to maintain a combined list comprised of their ophthalmic and supplementary lists.

The National Health Service (Optical Charges and Payments) (Amendment) (Wales) Regulations 2023

1.2 The National Health Service (Optical Charges and Payments) (Amendment) (Wales) Regulations 2023 (“the Optical Charges Regulations”) amend the National Health Service (Optical Charges and Payments) Regulations 1997 (“the 1997 Regulations”).

1.3 The 1997 Regulations provide for a scheme for payments to be made by means of a voucher system in respect of costs incurred by certain categories of people in connection with sight tests and the supply, replacement and repair of optical appliances (glasses and contact lenses). The Optical Charges Regulations update the value of certain vouchers for optical appliances provided under the 1997 Regulations. They also make limited provision in relation to eligibility for optical vouchers, including to make prisoners on leave eligible. They also make minor and technical amendments to the 1997 Regulations.

2. Matters of special interest to the Legislation, Justice and Constitution Committee

2.1 None

3. Legislative background

The Ophthalmic Services Regulations

3.1 The Ophthalmic Services Regulations are made pursuant to the Welsh Ministers' powers in sections 2, 3, 10, 12(3), 15, 71 to 74, 76(6), 76(9)(a) and (b), 78(6), 104 to 106, 107(5) and (7), 110(6)(a), (9) and (10), 115(9), 116 to 118, 119(3), (4) and (5), 203(9) and (10), 204(3)(c)(i) and 205 of the National Health Service (Wales) Act 2006 ("the 2006 Act").

3.2 Section 12(3) of the 2006 Act enables the Welsh Ministers to direct LHBs in relation to their health functions. Section 204(3)(c) of the 2006 Act provides that those directions may be made in the form of regulations. These regulations direct LHBs to arrange for the provision of eye examinations in their area in accordance with the Ophthalmic Services Regulations.

3.3 The Ophthalmic Services Regulations are made under the negative resolution procedure. They will come into force on 20 October 2023.

The Optical Charges Regulations

3.4 The Optical Charges Regulations are made pursuant to the Welsh Ministers' powers in sections 71, 129 and 203(9) and (10) of the 2006 Act.

3.5 The Optical Charges Regulations are made under the negative resolution procedure. They will come into force on 20 October 2023.

4. Purpose and intended effect of the legislation

4.1 The reforms summarised below seek to improve patients' access to eye health services ensuring that support is delivered by the right professional, in the right place across the entire eye care pathway of primary care optometry and specialist hospital eye care services.

4.2 Estimates set out in the Welsh Government's Future Approach for Optometry Services suggest that in half of the cases reported, sight loss could have been avoided. It is therefore imperative to expand provision in primary care, in which there already exists a skilled workforce to support hospital eye services (HES). Optometrists are an integral part of the transformation of eye care services, with the skills to deliver 'sight testing' and 'eye health examinations' in primary care.

- 4.3 The regulations form part of wider reforms aimed at ensuring that diagnosis, treatment, ongoing management, shared care, prevention and health and well-being advice become part of service provision in primary care.
- 4.4 This approach aligns Optometry with NHS Wales General Medical Services, Dentistry and Pharmacy in terms of the wider prevention, health and well-being advice to be provided at primary care level. Practitioners have the capacity and skill set to diagnose, treat, and manage more patients in primary care, providing care close to home and improving patients' access to specialist eye care services in a timely manner. This approach is intended to reduce the demand for a hospital led opinion and intervention, thereby, reducing the delay and backlog in patient appointments in HES. It is also the intention that demand on GPs will also reduce.
- 4.5 In Wales, the continued professional development of our primary care optometry workforce, ensures an appropriately skilled workforce is available to deliver the intended benefits brought forward by the necessary reform of services including the provision of eye health examinations.
- 4.6 The aim is to reduce the number of referrals into HES by approximately one third and enable the monitoring and management of low and medium risk patients within primary care, whilst maintaining specialist oversight in HES. This whole pathway approach lends itself particularly well to eye care where a redistribution of the demand can be achieved with an upskilled workforce in primary care.
- 4.7 The intention is that the wider reforms of which the regulations form part will accelerate eye health care delivery for health professionals and citizens across Wales. The following gains are intended for citizens:
- Improved timely access and reduced waiting times for individuals requiring specialised services in secondary care HES.
 - Improved timely access to sight testing, eye examinations, eye health treatment and management in primary care.
 - Patients will access enhanced eye care services within primary care optometry practices close to home.
 - Only patients who require specialist eye services will be seen in hospital.
 - Improved timely access for patients with eye pathology that could cause irreversible permanent sight loss, due to the reduced demand on HES.
- 4.8 The patient must be at the forefront and centre of all services delivered, regardless of the setting. The emphasis for all eye care services, both in hospital settings and in optometry practices, must be on achieving the earlier detection of eye health conditions to help reduce sight loss.

Ophthalmic Services Regulations

4.9 The Ophthalmic Services Regulations consolidate, revoke and replace, with amendment, the 1986 and 2006 Regulations. The key changes are set out below. Other minor and technical amendments have been made to the consolidated provisions from the 1986 and 2006 Regulations. The Ophthalmic Services Regulations also make minor and consequential amendments to other legislation.

Key changes - services

4.10 LHBs are required to make arrangements for the provision of eye examinations in their area. Previously, these eye examinations were provided by accredited practitioners on an 'opt-in' basis under Welsh Ministers' directions¹. They are now mandatory services that must be provided by all those who enter into arrangements with LHBs to provide sight tests (referred to as "contractors").

4.11 Provisions relating to sight tests remain largely unchanged though certain new categories of people are now eligible for a sight test and provision is made as to the advice to be provided to patients.

Key changes - LHB lists

4.12 LHBs are required to establish and maintain a combined list for their area which is comprised of (i) their ophthalmic list (i.e. the list of contractors who undertake to provide core primary care services under the regulations) and (ii) their supplementary list (i.e. the list of practitioners approved to assist contractors in the provision of those services).

4.13 These lists will replace the LHB's existing ophthalmic and supplementary lists. The Ophthalmic Services Regulations include transitional provision which has the effect that anyone included in the existing lists immediately before these regulations come into force is deemed included in the equivalent new list for an initial period of 28 days. During that 28 day period, those deemed to be included in a LHB's list must provide certain information to LHBs including evidence that they are accredited to provide the new mandatory eye examination services.

4.14 Student optometrists must be included in a LHB's supplementary list before they can be employed by contractors. This applies to those who are on the register of students held by the professional regulator, the General Optical Council, who are qualified to perform sight tests under supervision. The Regulations make transitional provision so that student optometrists do not need to be included in such a list until 31 March 2024.

¹ See the *Eye Health Examination Service Committee (Wales) Directions 2016*

- 4.15 Other changes include the removal of the previous requirement that an applicant must specify their sex when applying to be included in a LHB's list and changes requiring anyone included in either part of a LHB's combined list to notify the relevant LHB within 14 days where a change is required to the information contained about them in the LHB's list.

Key changes: contractors' terms of service

- 4.16 Contractors are required to:
- 4.16.1 provide eye health and/or vision advice as appropriate to the patient when providing a sight test;
 - 4.16.2 provide eye examinations to patients where specified criteria are met;
 - 4.16.3 make available a pair of basic glasses to patients who have been issued with an optical voucher;
 - 4.16.4 submit claims for payment for services within three months of the date the services were provided;
- 4.17 Other changes include requirements about audits, workforce reporting, cluster working and training, as well as onward patient referrals and agreeing times at which services will be provided.

Optical Charges Regulations

- 4.18 The 1997 Regulations provide for a scheme for payments to be made by means of a voucher system in respect of costs incurred by certain categories of persons in connection with sight tests and the supply, replacement, and repair of optical appliances (glasses and contact lenses). The scheme is intended to provide eligible people (such as children and those in receipt of certain benefits) with a voucher they may use to buy (or put towards the cost of) glasses. The value of the voucher is linked to the prescription required by the patient.
- 4.19 Assessment of the current optical voucher system highlighted inequity for patients with higher prescription needs, as the current voucher provided to patients at the higher prescription ranges does not, in all instances, cover the cost of the optical appliance. This results in patients at greatest need, both financially and clinically, often being asked to make significant financial contributions to the cost of their spectacles, despite being eligible for financial support. The Optical Charges Regulations update the voucher values so that they more accurately represent the standard cost of the optical appliance across all prescription ranges.

- 4.20 The changes to voucher values form part of broader reforms to the system of reimbursement for primary care ophthalmic services, including an increase in NHS sight test fee that will take effect from the date these regulations come into force. The changes to the optical voucher values are also supplemented by the new requirement for contractors to make a basic pair of glasses available to patients who have been issued an optical voucher, within the value of their voucher (as noted above).
- 4.21 The Optical Charges Regulations make transitional provision so that vouchers issued (but not used) before the regulations take effect have the value under the 1997 Regulations as they existed at the date of issue of the voucher. The new voucher values apply to all vouchers issued on or after the date these regulations come into force.
- 4.22 The Optical Charges Regulations also make certain amendments regarding eligibility for optical vouchers, including in relation to prisoners on leave, as well as other minor technical amendments.

5. Consultation

5.1 Formal consultation

- 5.2 A public consultation commencing on 24 April 2023 and ending on 19 June 2023 set out the detail of the Welsh Government's intention to reform the delivery of primary ophthalmic services in Wales. The consultation sought the views of local health boards, persons who provide or may apply to provide NHS ophthalmic services, persons who assist in the provision of ophthalmic services or may apply to assist in the provision of such services, professional bodies with an interest in NHS ophthalmic services, as well as other stakeholders, service users and the wider public.
- 5.3 The proposals have been developed against the key principles outlined within the Welsh Government's Strategic Equality Plan 2020 - 2024 which sets out our equality aims and objectives, together with the main actions to achieve those objectives. The consultation document has also been informed by the Primary Care Model for Wales, which is the agreed approach to achieving the vision set out in A Healthier Wales: our plan for health and social care. The model is about equity of access to the right care, at the right time from the right professional or service at, or close to home.
- 5.4 There was broad agreement to the proposals in the consultation which was widely received. In total the Welsh Government received 129 written responses to the consultation and there was broad agreement to the proposals. The responses reflect the direct and diverse views of optometrists, professional bodies, the private and voluntary sector, the

public, health and care sectors, wider medical disciplines, and academic institutions.

- 5.5 In consideration of the positive feedback received it has not been necessary to undertake significant amendments to the draft regulations.
- 5.6 The consultation responses included comments relating to optical voucher values. In light of those comments, an additional supplement applicable to children eligible for optical voucher A (up to and including 18) has been provided for in the regulations. That supplement will be paid for prescriptions within the 4-6D sphere range of voucher A to enable non stock lens solutions for an improved cosmetic appearance. The Welsh Government will also undertake an annual review of all optical vouchers, supplements and repair vouchers to the negotiated figures.
- 5.7 The consultation sought view on potentially requiring practitioners to complete a Disclosure and Barring Service (DBS) check to gain admission to the ophthalmic or supplementary list and requiring registration with the DBS Update Service. Having considered the responses received, no changes are made in that regard at this time as LHBs can already reasonably request an up-to-date DBS check of contractors and practitioners. The Welsh Government will continue to monitor this provision in line with the other contractor professions, particularly with respect to the annual update service available, which may reduce the administrative burden further.
- 5.8 Some of the proposals in the consultation will be given effect by directions. These relate to:
- a) making arrangements for the 'higher level' services that will be available in primary care, but which will not be mandatory of all those who provide NHS primary care optometry services.
 - b) payments to be made to NHS contractors who comply with certain new mandatory duties linked to audits, workforce reporting, quality improvement and cluster working;
 - c) a requirement that LHBs undertake an assessment of the population eye healthcare needs in the LHB's area every three years; and
 - d) requirements that LHBs establish and maintain administrative lists of (i) the practitioners providing primary care NHS optometry services and (ii) dispensing opticians who are employed to assist in the provision of NHS eye examinations.
- 5.9 The consultation documents and a summary of the responses are available at:
- [Proposals to reform the ophthalmic services delivered in primary care in Wales.](#)

5.10 Informal consultation

5.11 In addition, and in advance of the formal consultation, there had been extensive engagement with the optometry sector in respect of the proposals. The Welsh Government began a series of meetings and workshops in Autumn 2019 with the aim of scoping what the future of eye care services should look like from a patient's perspective across the primary and secondary eye care pathways in Wales. Stakeholders included community health councils, local health boards, representative bodies of optometry and dispensing opticians, together with representation from ophthalmology, orthoptists and ophthalmic nursing.

5.12 Thereafter, the Welsh Government continued to bring together these key stakeholders in the delivery of eye care from across Wales to work in collaboration to agree a national approach, which resulted in the publication of the NHS Wales Eye Healthcare: Future Approach for Optometry Services document. The document set out the Welsh Government's expectations for delivery of eye care services over the next decade.

6. Impact Assessments

6.1 In addition to a Regulatory Impact Assessment (RIA), an Integrated Impact Assessment (IIA), Equality Impact Assessment (EIA) and a Children's Rights Impact Assessment (CRIA) accompanied the consultation exercise. The link to each assessment is provided below together with a brief summary.

6.2 [Reform of primary care ophthalmic services: integrated impact assessment](#)

6.3 From the public's perspective, the impacts identified and brought about by the proposals are:

- Improved timely access and reduced waiting times for individuals requiring specialised services in secondary care HES.
- Improved timely access to 'sight testing', holistic eye health examinations and eye health treatment and management in primary care.
- Patients will access enhanced eye care services within primary care optometry practices close to home.
- Only patients who require specialist eye services will be seen in hospital.
- Improved timely access for patients with eye pathology that could cause irreversible permanent sight loss, due to the reduced demand on HES.
- Improved alignment with the other contractor professions of current, and new core terms of service for prevention and well-being support

for individuals in primary care i.e., sign posting to other health and social care professionals for ongoing health and well-being support.

- Up-skilled primary care workforce, to work at the top of their licence and to also provide shared care across the whole of primary and secondary care and all patient eye care pathways.
- A reduced reliance on the sale of spectacles and contact lenses will improve the experience and outcomes for patients accessing primary eye care services.
- Legislative changes will ensure that an optical appliance is available and provided free of charge to an eligible patient through the optical voucher system.

6.4 From an Optometrist's perspective, the impacts identified and brought about by the proposals are:

- Enablement to utilise full professional capability in the delivery of eyecare at primary care level.
 - Optometrists are an integral part of the transformation of eye care services, with the skills to deliver 'sight testing' and 'eye health examinations' in primary care.
 - Practitioners have the capacity and skill set to diagnose, treat, and manage more patients in primary care, providing care close to home and improving patients' access to specialist eye care services in a timely manner.
 - The focus on health and well-being advice and patient self-care aligns Optometry with NHS Wales General Medical Services, Dentistry and Pharmacy providing consistency across primary care professions.
 - All of this is underpinned through a programme of high-quality education and skills improvement aligned to continued professional development, reflective practice, and mentoring.
 - The new financial package underpinning the reform reduces the retail cross subsidy that has been in place since the mid 1980's and replaces it with a significant increase in remuneration for the optometry profession to deliver clinical services and to thrive in a clinical environment with appropriate remuneration. In short optometrists will be paid more appropriately for their clinical work, replacing the reliance on retail sales of appliances to subsidise the cost of clinical services.
 - This will require a change in the business model for optometry practices which will require a period of readjustment.
- [Reform of primary care ophthalmic services: equality impact assessment](#)
 - The impact of the proposals has been measured against the key principles outlined within the Welsh Government's Strategic Equality Plan 2020 – 2024 which sets out our equality aims and objectives, together with the main actions to achieve those objectives.

- The assessment describes and explains the impact of the proposal on people with protected characteristics as described in the Equality Act 2010, an analysis of which demonstrates the positive impacts achieved through accelerating access to clinical care within a primary care setting.
- [Reform of primary care ophthalmic services: children's right impact assessment](#)
- The CRIA focuses more specifically on any impacts, intended or otherwise, on children and young people, and if any rights have been infringed. There are no identified negative impacts for children or young people and the assessment document details the means in which the new provision highlighted within the paper is deliberately intended to ensure equality of support to those under 18 who are care leavers or are in the care of a Local Authority.
- Officials have considered how this proposed policy impacts on the United Nations Convention on Rights of a Child (UNCRC). The Articles that could apply are Articles 1, 2, 3, 4, 20, 25 and 27 and concluded that no negative impact is predicted on the Rights of the Child as the legislation will provide equality to all under 18-year-olds who are care leavers or are in care as they will be entitled to all entitlements relating to eye care. The remainder of the Articles have been assessed as not applicable.
- **Justice Impact Assessment (JIA) Statement**
- The potential impact on the justice system has been considered and assessed; the conclusion was that there is nil or a minimum impact on the Justice System arising from these regulations.

PART 2 – REGULATORY IMPACT ASSESSMENT

1. A Regulatory Impact Assessment (RIA) on the likely costs, benefits and risks associated with the proposed policy changes accompanied the consultation exercise and the link is available here with the duplicate narrative following below:

- <https://www.gov.wales/reform-primary-care-ophthalmic-services-regulatory-impact-assessment-ria>

1.1 Introduction and Guidance

- 1.1 Regulatory Impact Assessments (RIAs) provide Welsh Ministers, the Accounting Officer, Senedd Cymru and stakeholders with information on the likely impact of proposed legislation and can be regarded as:

- a process to help the Welsh Ministers consider the impact of proposed regulation on the interests of individuals, groups, organisations;
- a tool to enable the Welsh Ministers to weigh the costs and benefits of all options available to them before implementing a policy;
- and a means of presenting for scrutiny the relevant evidence on the positive and negative effects of such interventions.

- 1.2 The Welsh Government is committed to reforming the provision of ophthalmic services in Wales and this RIA provides an assessment on the likely costs, benefits and risks associated with the proposed legislative changes. Those who may have an interest in this assessment include service users, health boards, persons who provide or may wish to apply to provide NHS ophthalmic services, persons who assist in the provision of ophthalmic services or may wish to apply to assist in the provision of such services, and representative bodies.

- 1.3 This RIA accompanies an eight-week consultation which sets out the detail of the Welsh Government's proposals to reform the ophthalmic services delivered in primary care in Wales.

- 1.4 The Welsh Government has also prepared an *Integrated Impact Assessment (IIA)* alongside the consultation which has considered the main impacts of the policy delivery.

2. Options

- 2.1 The [NHS Wales Eye Healthcare: Future Approach for Optometry Services](#) document sets out the Welsh Government's expectations for delivery of eye care services over the next decade. The focus is to improve access to eye health services, enabling patients to access services delivered by the right professional, in the right place across the entire eye care pathway of primary and community care optometry and specialist hospital eye care. Delivering on this programme requires changes to the legislation to

accelerate access to eye care services in primary and secondary care.

2.2 The options are as follows:

2.3 Option 1 - Business as usual and leave as the status quo by retaining the existing secondary legislation as it is with no changes:

2.4 Delivering on many of the key commitments for reform outlined in the [Programme for Government](#) and the nationally agreed *Future Approach for Optometry Services* in Wales require changes to the legal framework as the scope of services and terms of service applying to those providing ophthalmic services are set out in legislation.

2.5 Specifically, the reform requires the consolidation of two existing sets of regulations into one main set of regulations provisionally titled the National Health Service (Ophthalmic Services) (Wales) Regulations 2023. The new set of regulations will include provisions to enable the Welsh Government to expand the types of eye care services provided in primary care.

2.6 Retaining the status quo and maintaining the legislative framework as it currently stands will not meet the demand for ophthalmic services in Wales which is predicted to increase significantly over the next 20 years linked to an increasingly elderly patient cohort and increased population. This data source is from the Royal College of Ophthalmologists, the College of Optometrists and Third Sector. A key driver for change is the need to alleviate pressure on hospital eye departments. Moving the delivery of some eye care services from hospitals to primary care optometry, where there is a skilled workforce with the capacity to meet the predicted substantial increase in demand, is the most viable and sustainable solution.

2.7 This is only achievable through amending and replacing the legislation which will enable an increase in the range of services delivered closer to home in primary care, by a trained and equipped workforce.

2.8 Option 2 - Make no changes to the legislation and recruit more specialist eye doctors (ophthalmologists) to work in Hospital Eye Services (HES):

2.9 Again, this option does not fulfil the obligations set out in Future Approach for Optometry Services in Wales in terms of introducing new eye care pathways to reduce the number of referrals into HES which can only be achieved through adjusting the legislation. Primary care optometry services in Wales are especially equipped to meet the challenges relating to eye health care as a result of the efforts undertaken to upskill the workforce in primary care settings over recent years. This whole pathway approach lends itself particularly well to eye care in Wales where a redistribution of the demand can be achieved with an upskilled workforce.

2.10 Furthermore, in practical terms, advanced eye health treatment and ongoing management can no longer be solely delivered in secondary care

by HES, as there simply isn't the available workforce to do so, now or in the future as is highlighted in the [External Review of Eye Care Services in Wales \(rcophth.ac.uk\)](https://www.rcophth.ac.uk) September 2021 report. Capacity to provide hospital services is far below the demand for specialist eye care services, which has been exacerbated by the Covid 19 pandemic and a shortage of qualified personnel.

- 2.11 The Welsh Government is committed to improving health care services in Wales and improving provision for people with poor eye health is a priority. Retaining the status quo in terms of the legislation would not improve patients' access to eye health services as it would not bring into being the creation of shared care services outlined in *A Future Approach for Optometry Services*.
- 2.12 For these reasons, this option has been discounted.
- 2.13 **Option 3 - Revise the current framework within existing powers by updating the existing secondary legislation:**
- 2.14 With this option, the creation of shared care services will be brought into being which would expand the provision of ophthalmic services to encompass wider eye health so that such services may be delivered in primary care. The new ophthalmic services Regulations and Directions would deliver the reform of the provision of eye care services in Wales, the focus of which is on holistic eye health care.
- 2.15 The new legislation will expand the services which LHBs are required to arrange when making arrangements for ophthalmic services, the scope of what constitutes as general ophthalmic services and will accelerate eye health care delivery for health professionals and citizens across Wales. The increase in clinical services delivered by optometrists, working together with hospital eye departments, will provide NHS Wales with assurance that delivery will be equitable, consistent, and timely for all citizens across Wales.
- 2.16 The emphasis for all eyecare services, both in hospital settings and in primary care optometry practices, must be on achieving earlier detection of eye health problems to help reduce sight loss. The changes to the legislation will increase timely access to 'sight testing', holistic eye health examinations and eye health treatment and management in primary care.
- 2.17 The increase in sight loss has a significant effect on the wider health and social services systems due to a number of associated factors. The effect upon patients due to a of loss of independence, trips, falls and mental health problems, including depression is far reaching from both a quality-of-life perspective and also a financial perspective, particularly for those of working age with sight loss.

3. Welsh Government Costs:

3.1 There will be some increase in costs due to delivery of improving services and the Welsh Ministers have agreed funding in 2022/23 of £15m, 2023/24 of £25m and £30m in 2024/25. This will be in addition to the existing budget of £43m per year to invest in and deliver the transformed NHS Wales Ophthalmic Services.

4. Public Sector costs:

4.1 The implementation and enforcement of these regulations will not constitute additional costs for Local Authorities. There will be minimal or no impact on the justice system and no additional costs to Police Forces in Wales.

5. Cost to individuals

5.1 The Welsh Ministers are required under section 129 of the NHS (Wales) Act 2006 to provide for payments to be made to help with the cost of sight tests and optical appliances (spectacles or contact lenses) for certain categories of eligible person.

5.2 Support is available to eligible patients towards the cost of optical appliances via the provision of an optical voucher which they can take to any supplier of their choice. The voucher may be used to either meet or contribute towards the cost of the patient's spectacles or contact lenses depending on the amount charged by the supplier for the relevant optical appliance and the voucher value. In return, ophthalmic practitioners / suppliers of optical appliances are able to redeem the optical voucher value from NHS Wales.

5.3 The supply of an optical appliance (through an optical voucher) is a patient benefit for the most vulnerable in our society and not a means of additional income for an optometry practice.

5.4 The proposed draft National Health Service (Optical Charges and Payments) (Amendment) (Wales) Regulations 2023 will make small amendments to the eligibility criteria to include prisoners on leave as eligible for vouchers in certain circumstances, and to provide that under 18-year-olds in care of a local authority are eligible for all optical vouchers. There will also be a change in NHS optical voucher values that assist with the cost of appliances.

5.5 Assessment of the current optical voucher system highlighted inequity for patients with higher prescription needs, as the current voucher provided to patients at the higher prescription ranges does not, in all instances, cover the cost of the optical appliance. This results in patients at greatest need, both financially and clinically, often being asked to make significant financial contributions to the cost of their spectacles, despite being eligible for financial support.

5.6 Amending the National Health Service (Optical Charges and Payments) Regulations 1997 ("the 1997 Regulations") will enable the Welsh Government to provide an amended payment structure, reflecting new

optical voucher values that more accurately represent the standard cost of the optical appliance across all prescription ranges.

5.7 A key intention underpinning this legislative development is to ensure continued equitable access for eligible patients across all prescription (lens strength) ranges.

5.8 To safeguard provision for eligible patients, the inclusion of a duty is proposed within the draft National Health Service (Ophthalmic Services) (Wales) Regulations 2023 which will legally oblige practitioners who provide NHS sight tests and sell spectacles to make available a basic pair of spectacles for those people who are eligible for a voucher towards the cost of spectacles.

5.9 The basic pair of spectacles must meet the specification of the individual's prescription and be within the value of the relevant voucher to which the individual is entitled. This will ensure that an eligible person will be entitled to a basic appliance without further cost, thereby ensuring equity of access across all prescription ranges, ensuring they remain accessible for those most vulnerable.

5.10 The Regulations are not expected to alter the cost to individuals who are not eligible for an optical voucher. Those individuals currently have to pay for a sight test and for their spectacles (if required) and that will remain the case once the new service has been introduced.

6. Cost to Opticians / Optometry Practices:

6.1 As referred to above, proposed amendments to the 1997 Regulations include a change in NHS optical voucher values which affects the way ophthalmic practitioners / suppliers of optical appliances are paid for their services, given that they redeem the voucher values from NHS Wales.

6.2 Introducing changes to the way optometrists are paid for delivering services has been meticulously planned and prescribing updated optical voucher values helps to underpin the move towards a more clinical model of service delivery whereby optometrists are paid more appropriately for their clinical work, whilst also safeguarding continued access for eligible patients across all prescription ranges, as explained in the preceding section.

6.3 The Welsh Government is committed to leading eye care reform clinically from a patient centred perspective, and Wales is the first UK nation to fully embrace clinical services in optometry primary and community care, founded on the key principles of prudent healthcare.

6.4 The new updated optical voucher values, together with an increase to the clinical fee for providing an NHS sight test, replaces the reliance on retail sales of appliances to subsidise the cost of clinical services, and increases capacity for clinical work.

6.5 The revised voucher values have been set at a point which more than cover

the cost of an appliance at each prescription strength. *Optometry practices will not therefore be negatively affected in terms of the proposed funding arrangements and will in fact experience an overall increase in payment as a result of the new voucher values combined with being paid more appropriately for their clinical work including the enhanced “sight test”.*

- 6.6 The Welsh Government collated and analysed all current financial arrangements, including clinical and the optical vouchers, to ensure the whole system change of optometry service delivery is fit for purpose. The values of optical vouchers have been determined by a cost-plus method in which an analysis of the trade cost of supplying the optical appliance together with an additional dispensing fee has ensured that appropriate remuneration payment rates have been established for optometry practices, across all voucher values and prescription ranges.
- 6.7 The current optometry financial arrangement, based on the UK contract from the mid 1980’s, has low financial remuneration for clinical interactions (sight tests), with higher financial remuneration for the retail element of the optical voucher (provision of an optical appliance following a sight test). This retail element subsidises the clinical interaction.
- 6.8 The new financial package alleviates the retail cross subsidy that has been in place since the mid 1980’s and replaces it with a significant increase in remuneration for the optometry profession to deliver clinical services and to thrive in a clinical environment with appropriate remuneration. Likewise, the new clinical model enables patients to receive timely treatment when they need it and helps to support optometry practices to sustain their future business model.
- 6.9 These changes have been agreed through negotiation with the profession, and clinical fees and voucher values will continue to be subject to annual, tripartite negotiations between Welsh Government, NHS Wales, and Optometry Wales. This will ensure optometry practices are accurately and fairly remunerated for the work completed.
- 6.10 Appendix A outlines a detailed cost comparison demonstrating how the model benefits the patient, the health professional, optometry practices and NHS Wales.

7. Benefits:

- 7.1 The legislative changes will support a system-wide approach for NHS Wales, to provide eye health care, where appropriate, in primary care and not just sight tests.
- 7.2 Prevention and well-being will be further embedded across all optometry services, facilitating improved patient outcomes and reduced demand for General Practice (GP) and specialist HES, in line with prudent health care principles. Putting in place legislation encouraging the population, at the first point of contact with an optometrist, to take preventative action to avoid

permanent sight loss that would have an impact on their quality of life, has obvious benefits for individual citizens and local economies. This aligns Optometry with NHS Wales General Medical Services, Dentistry and Pharmacy in terms of the wider prevention, health and well-being advice provided at primary care.

7.3 The emphasis for all eyecare services must be on achieving earlier detection of eye health problems to help reduce preventable sight loss. Estimates set out in the Welsh Government's Future Approach for Optometry Services suggest that in half of cases reported, complete sight loss could have been avoided, emphasising the importance of early intervention and prevention. It is therefore imperative to expand provision in primary care in which there already exists a skilled workforce. Optometrists are an integral part of the transformation of eye care services, with the skills to deliver 'sight testing' and 'eye health examinations' in primary care.

7.4 Sight loss has impacts across health and social services and the economy more generally. The [Time to focus report](#), which was launched by eye care charity Fight for Sight demonstrates the personal impact and wider costs of sight loss and has revealed that sight loss costs the UK economy £25.2 billion a year, as summarised below:

- There are over two million people in the UK living with sight loss, more than half of which is avoidable. This number will jump to 3.5 million by 2050.
- Sight loss costs the UK economy £25.2 billion a year, which is estimated to rise to £29.9 billion a year by 2030 and £33.5 billion a year by 2050.
- 84% of the economic costs of sight loss lie outside the health and social care system, reflecting the costs of 'informal care' by family and friends and the loss of productivity as a result of barriers to the workplace and impact on quality of life.
- The report estimates that this informal care is costing the UK economy £8.5 billion a year – a third of the total cost.
- 37% of people of working age with severe sight loss are not working due to their eye conditions. These barriers to productivity are costing the UK economy up to £7.4 billion – nearly another third of the total costs.
- The impact of sight loss on people's quality of life accounts for up to £4.6 billion – almost a fifth of the total costs.
- Compared to the UK population as a whole, people living with eye conditions reported far more problems achieving a good quality of life, with half of respondents saying they couldn't carry out usual activities.
- 41% of respondents said they experience anxiety and depression, with 30% feeling most affected by how their eye condition limits their independence and freedom to make choices.
- 70% feel some area of their life is limited by their eye condition, while 24% think their sight loss has a negative impact on their personal relationships and 21% said it limits their ability to develop personal

relationships.

- 7.5 Assuming the UK cost associated with sight loss can be split broadly in line with population share, this suggests the cost in Wales is approximately £1.17bn per annum (based on mid-2021 population figures). Given that Wales has a larger proportion of the population in older age groups compared to the UK as a whole, this is potentially an underestimate of the cost in Wales. On this basis, it is estimated the cost of sight loss in Wales would need to fall by approximately 2% per annum for the benefit of the new service to be equal to the best estimate of the additional service delivery cost.
- 7.6 The evidence resoundingly supports the need to update the legislation in order to increase the range of services delivered in primary care by practitioners. By diagnosing, managing and treating more patients in primary care, using optometrists with higher qualifications, patients will have access to the appropriate care close to home.
- 7.7 This approach will significantly reduce the demand for ophthalmology opinion and intervention. This ensures patients who need to access HES can do so appropriately in a timely manner as a result of the increased capacity released in primary care to attend to the majority of patients' needs.
- 7.8 The latest publication of [Sensory Health \(eye care and hearing\) statistics April 2019 to March 2021](#) confirm that increasing demand for HES remains a challenge across Wales, wider UK nations and Europe.
- 7.9 In 2019-20, over 100,000 (104,233) ophthalmology referrals were made for a first outpatient appointment. This fell to around 60,000 (63,392) in 2020-21 in which eye care services had been affected by the Covid 19 pandemic with the impact reflected in the data for the financial year 2020-21.
- 7.10 In 2019-20, there were over 310,000 (314,054) attendances to ophthalmology outpatient appointments in Welsh hospitals. Again, this fell to less than 190,000 (186,728) in 2020-21, in view of the Covid 19 pandemic.
- 7.11 Even within the context of the pandemic, the data reveals an overreliance on hospital services particularly in light of the fact that the eye care sector in Wales, supported by the Welsh Government, has evolved significantly over recent years and has the skills and qualifications to manage more patients in primary care.
- 7.12 The aim of the new eye care pathways enabled by the legislative changes is to reduce the number of referrals into HES by a third, and to increase capacity in HES by freeing up follow up appointments through monitoring, management and treatment in primary care. Enabling Ophthalmic Primary Care services to provide, where appropriate, clinical support to patients without unnecessary onward referrals to HES represent the most clinically appropriate and cost-effective solution, increasing capacity within hospitals.

7.13 In Wales, the continued professional development of our primary care optometry workforce, ensures an appropriately skilled workforce is available to deliver the intended benefits brought forward by the necessary reform of services including the provision of eye health examinations. Over the past 5 years, increasing numbers of practitioners have gained additional post graduate qualifications in medical retina, glaucoma, and independent prescribing. This is a significant move towards a new clinical model of eye health care in Wales.

7.14 The increase in clinical services delivered by optometrists, working together with hospital eye departments provides the best outcomes for individuals, as more eye health concerns will have been detected earlier, providing assurance to NHS Wales that delivery will be equitable, consistent, and timely for all citizens across Wales.

8. Conclusion

8.1 The Welsh Government is committed to its reform of the provision of primary care services in Wales. Therefore, to pave the way for a modern, agile and patient centred provision of ophthalmic services in Wales, the preferred option of the Welsh Government is option 3 which involves revising the current framework within existing powers by replacing and amending the existing secondary legislation.

9. Competition Assessment

9.1 A Competition Assessment has been undertaken to assess the potential impact of making changes to the legislation. This policy is not expected to have a significant detrimental effect on competition within the industry. Optometry reform will remunerate health professionals for their clinical skills. Similarly, the new clinical model enables patients to receive timely treatment when they need it whilst also financially supporting optometry practices to sustain their future on the high street. The policy does not discriminate between premises, applying equally to all. The results of a filter test (consisting of nine yes/no questions) which support this conclusion are below, followed by evidence to support the answers.

The competition filter test	
Question	Answer yes or no
Q1: In the market(s) affected by the new regulation, does any firm have more than 10% market share?	Yes
Q2: In the market(s) affected by the new regulation, does any firm have more than 20% market share?	Yes
Q3: In the market(s) affected by the new regulation, do the largest three firms together have at least 50% market share?	Yes
Q4: Would the costs of the regulation affect some firms substantially more than others?	No
Q5: Is the regulation likely to affect the market structure, changing the number or size of firms?	No

Q6: Would the regulation lead to higher set-up costs for new or potential suppliers that existing suppliers do not have to meet?	No
Q7: Would the regulation lead to higher ongoing costs for new or potential suppliers that existing suppliers do not have to meet?	No
Q8: Is the sector characterised by rapid technological change?	No
Q9: Would the regulation restrict the ability of suppliers to choose the price, quality, range or location of their products?	No

10. Post implementation review

10.1 We will monitor the implementation of the new service and financial model for 12 months following the date of the legislative provisions coming into force. This new model will be monitored against the targets that have been set within the Future Approach for Optometry Services. Annual interim reports and an official review assessing the impact of the legislative changes following the first five years, will be provided for publication by the Welsh Government.

Appendix A

2019/2020

Voucher type	Vouchers reimbursed	Proportion of total
Voucher type A	208,033	0.733523032
Voucher type B	36,277	0.127912471

Total vouchers reimbursed	283,608	

EHEW Examination Type	Number of Examinations	
Band 1	119,890	
Band 2	48,052	
Band 3	33,266	
Total	201,208	

Based upon an average of 18 patients per day seen by an optometrist, with a conversion rate of 65 % (conversion of a sight test into new/changed prescription and the issue of an optical voucher). Calculations do not include new service.

Average calculations:

(GOS Only)

Average sight test time

25 minutes

Average working day 7.5 hours
Average number of GOS only sight tests performed in a day 18
Average number of GOS sight tests when mixed with EHEW 14.6

(This has been calculated using the ratio of GOS to EHEW examinations as seen in 2019/20 which shows 0.8118 GOS sight tests to 0.1882 EHEW examinations.)

Average conversion rate from sight tests 65%

(GOS plus EHEW)

Average number of Sight Tests 14.6
Average number of St's converted to voucher dispense 9.5
Average number of EHEW Examinations 3.4

Current Values		New Values
